EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frankie Wong on 9/25/08.

The application has been amended as follows:

IN THE CLAIMS:

Cancel claims 21-27, 30-34 and 38-39

2. The following is an examiner's statement of reasons for allowance: Applicant claims clock selection circuitry for selecting between a received video input clock and a received display output clock, and a scaler engine to generate respective first and second scaled video images by upscaling the video image using one of the selected clocks and by downscaling the video image using one of the selected clocks (claims 7, 40, 51 and 57).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Information Disclosure Statement

3. The information disclosure statement filed 8/13/07 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because it does provide a date for each publication. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the clock selection circuitry referenced in Specification Para 278-279, e.g. Fig. 24, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Response to Arguments

5. Applicant's arguments filed 6/2/08 with respect to claims 21, 30 have been fully considered but they are not persuasive.

Applicant argues Potu does not teach deciding whether to upscale or downscale the video image.

In response, Potu teaches a video adapter for resizing video via upscaling and downscaling. The video adapter (Fig. 2 "22") of Potu receives an input video signal, e.g. NTSC converted to YUV, that is forwarded to either of its upscale logic (Fig. 2 "46b") and its downscale logic (Fig. 2 "46a") for further transmission to video codec (Fig. 2 "48") that compresses or decompresses the input signal to reduce bandwidth prior to storage of the signal in a buffer (Fig. 2 "50"). Applicant's Specification (Para 49) teaches the video scaler conserving memory, i.e. reducing bandwidth, by downscaling before saving to memory. Thus, Potu teaches deciding whether to upscale or downscale the video image as he teaches using either of upscale or downscale logic as input to a video codec that scales the input video signal to reduce bandwidth.
